¹The manner in which Ranch-Way has categorized each of the competitor's products are not necessarily representative of how respective company would recommend their products. Products are listed based on the "closest fit" in regard to the guaranteed analysis, feeding instructions, and company literature. ²Protein and Fat values are reported as percentages on an as-fed basis as would be indicated on the label or other company published literature. ³Calories are reported as Megacalories (Mcal) of Digestible Energy (DE) per pound of feed on a dry-matter basis. The values reported are formula-derived or are based on sample analysis conducted by an independent commercial lab (Equi-Analytical Laboratories, Ithaca, NY). ⁴Sugar and starch, or total non-structural carbohydrates (NSC), values are reported as percentages on an as-fed basis and are derived from sample analysis conducted by an independent commercial lab (Equi-Analytical Laboratories, Ithaca, NY), are formula-derived, and/or are based off of company published literature. NSC = water soluble carbohydrates (includes mono, di, and polysaccharides) + starch (as defined by NRC, 2007).

A*A = All American brand horse feed.
