

**MUSCLE MAX**  
**MAXIMIZE LEAN MUSCLE**

# Bull Developer

We know how to grow bulls! Muscle Max has been used by top bull developers (on a custom basis) for years in the Rocky Mountain and High Plains region to soundly grow their bulls in preparation for spring bull sales. Muscle Max is packed full of advanced nutrition technology that provides growing bull calves with the boost they need to develop into mature productive herd sires. Muscle Max is a ration balancing pellet that complements most types of farm-raised commodities in our region. *It's a little pellet with a lot of potential...*

#### Features Include:

- Novel use of trace mineral technology + rumen by-pass amino acids for more muscle.
- Availa-4® for optimized trace mineral status, fertility and reproductive performance.
- Formulated to promote foot health and soundness.
- Rumensin® for increased feed efficiency, weight gain, and coccidiosis control.
- To deliver comprehensive nutrition, feed 2/3 to 1 lb of this pellet per bull per day in the TMR.

**Weaning Suggestion:** Start your calves on our 15% Premium Calf Creep w/Bio-MOS & Availa. This creep was made with your valuable replacement heifer and bull calves in mind. This starter feed has high levels of digestible fiber, is low in starch, and provides complete vitamin and mineral nutrition. It is the safest creep-feeding solution for your calves. Improved mineral status = better response to your vaccination program = less morbidity. We recommend adding Bovatec & CTC.
